

Material Afternoon C(h)ameleon

the 18.03.2010 from 11.00 to 15.00

Transplant, Dale i Sunnfjord / Norway

Booking deadline: before the 15.03.2010

Over time and through evaluation though, many animals have developed natural forms of defence or survival techniques. One of the most visibly apparent examples of this is the Cameleon, a distinctive and highly specialized type of lizard. Some, but not all, chameleons have the ability to change the colour of their skin as to blend into their surroundings and camouflage themselves from potential predators or prey. This transformational ability and many more such as the possibility to cause change under the influence of electricity, light, water or movement to materials with varied optical effects can be found in Nordic Materials latest exciting and relevant Cameleon Material Exhibition. From examples of use in the fashion and textile industry to materials that have been used for full building facades, Caméléon is an up to date insight into a field related to the Biomimicry field many are exploring at present.

Program

Prospective: specialists visions, innovators, relevant researches

Material: over 10 materials samples showcases

Application: professional and companies examples

Lunch: tasty and warm lunch at Transplant & networking

Opening of "C(h)ameleon": guided tour & dialogs

one free

per Material Access

950,-Nok

per person / ind. lunch
excl. mva
